

SUSTAINABILITY POLICY

As Pimsa Automotive, we are aware of our environmental, economic, and social responsibilities. Our human and environment-based sustainability approach, which includes the welfare and development of future generations, respect for nature, economic sustainability, and a strong society is both reshaping and strengthening us. With this consciousness and desire;

- Developing our processes to create better quality and environmentally friendly production, long service life and safe products with a sustainable strategic business model,
- As part of the circular economy approach, analyzing potential risks in existing and planned processes and considering the entire product life cycle during process design and development,
- Minimizing our raw material, gas, electricity and water consumption for resource efficiency and a quality future,
- Developing our processes to reduce greenhouse gas emissions and wastes through a high sense of responsibility towards nature and new generations,
- Improving the working conditions for the motivation of our colleagues, and take the necessary precautions regarding occupational accidents and safety,
- With the awareness of social responsibility, doing our best for the development and strengthening of the society, and advocating equality and diversity in all areas of society.

As Pimsa Family, in order to reach higher corporate, environmental, economic and social standards and to increase our quality we sincerely pledge our commitment to sustainability policies and present them to the attention of all our stakeholders.
